How to Disassemble Abu 6500 C3CT Mag Elite

by spudgun » Tue Jan 20, 2009 11:29 pm

Too much time on my hands. Nuff said. 😊

Hope it helps though. 😊

Nice one Jon. I must admit I had a bit of a dilemma positioning part #23506

I think it's the magnet housing spring.

Any chance of a close-up with it in situ so I can see if I got it spot on. 🧐

I know what you mean Bill, that's the reason I started it. Could never get it right even with the schematic.

There's a few ways you can position the spring but only the one way will work:

You also need to slide the mag adjuster (23504 and 23523) in the right position for it to engage the ratchet spring (25222) and the top of the mag housing (23501).

P.S. all thumbnails are clickable. 😎

"How to Disassemble Abu 6500 C3CT Mag Elite" is not the issue; getting the buggers back together is the tricky bit! They are beautiful reels to use and I love them. However, reassembling one after merely taking off the spool-end side plate (i.e. the one without the handle) requires some know-how that is far from intuitive!

Apparently Abu was originally a watch-making company, which won't surprise anyone who's ever had the misfortune to disassemble one!.....

...And my Maudlin shall sing you one of her best ballads; for she and I both love all anglers, they be such honest, civil, quiet men.

Just got it off with pliers:)

But the fecken thing pinged off some where in the garage.

I've called off the search doesn't look like theres much hope 😞

Where can i get a new one from ?

Use a fine flat head screw driver to pri the C clip off using your finger to stop it pining off into the unknown. 😊😂

Can Someone Offer Me Some Advice Please?

I've got the older green version of the 6500 C3CT Mag Elite. When I bought it secondhand it had no brake blocks inside it (Pt

Nos: 22565). I've just about got use to it now, with only the occasional nest at the start of a cast.

😬Is it worth me obtaining 2 brake blocks to further reduce the chance of a nest - on the ABU schematic layout it includes them but I've looked at Utube stripdowns and they are also missing ???

You put the brake blocks in like this.

Be careful they don't fall off when you put it back together. Search the forum for Pete Coogan. He'll sort you out with spares. I've put his contact details on here somewhere.

I tried using the reel without the blocks and ended up fluffing it all the time. The mags are not enough alone unless you've got a nice smooth cast.

For the time being you could make do with a very small bead or but a short length of wire insulation or a length off a cotton bud.

Possibly not the best solution but I normally take a piece of wire and remove the core, leaving a tube of insulation. I then cut the tube down with a blade to the right size for a brake block and use them.

For the price of the brakes you're probably as well buying them but I needed some quick so I improvised.

Also if youre doing okay without them, I'd suggest only fitting one of them to the spool and if you need more then use the mag brakes on a very low setting. The thing with the brake blocks is that you can't adjust them when youre out fishing and I'd advise against splitting your reel open on the beach. lol.
